

Sample Book Title

BSR Performance Report

Rolling 35-day window

About this report

This report tracks estimated daily sales and profit for this title, based on its Amazon Best Sellers Rank (BSR). It covers the trend over the last 35 days plus a month-by-month history, so you can spot momentum shifts and check whether revenue is on pace.

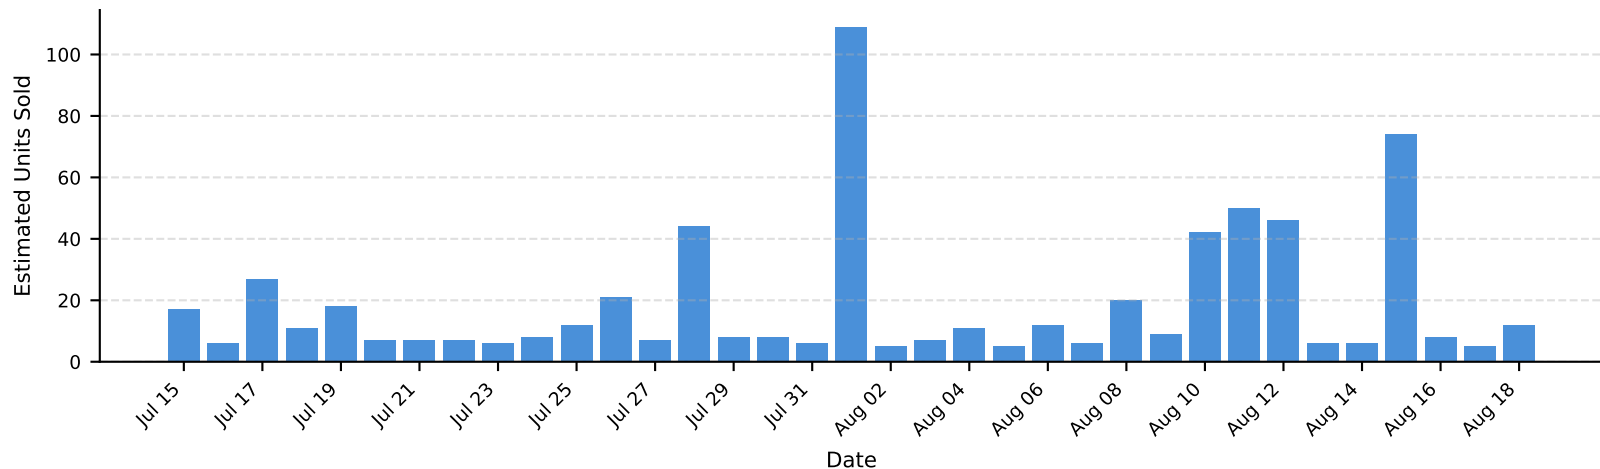

Methodology

BSR is scraped once per day from the Amazon product page. Sales and profit are estimated with the standard BSR-to-sales power-law approximation:

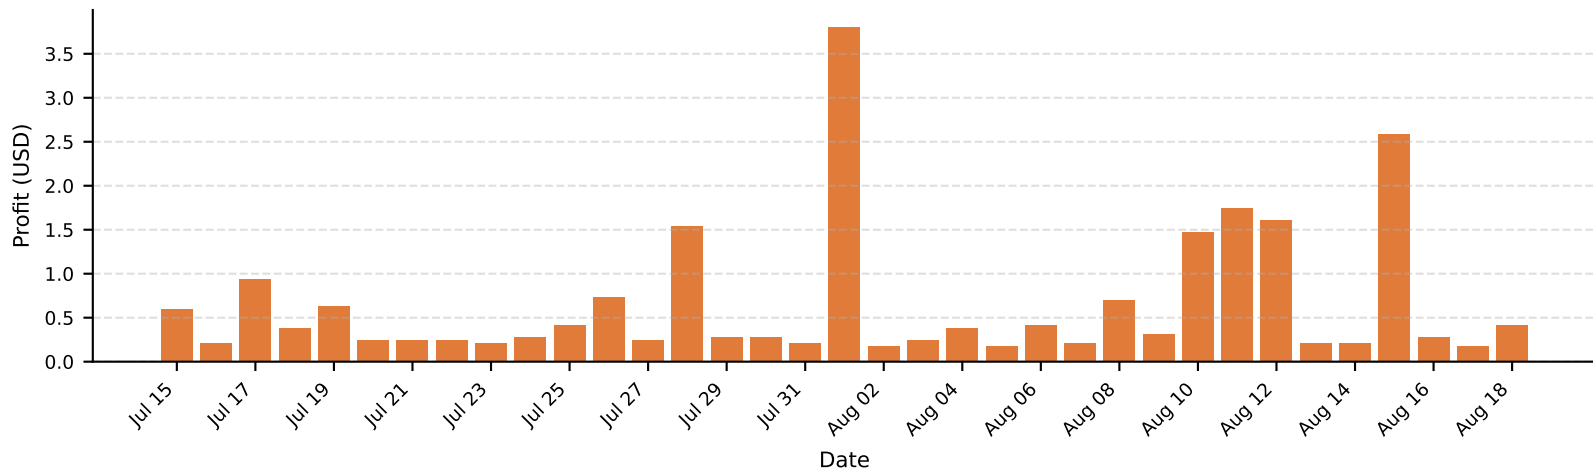

```
estimated_units = round( 10,000 / BSR^0.70 )  
daily_profit    = estimated_units × $4.99 × 70%
```

Price and royalty % are as entered in the tracker dashboard. These are estimates only – actual figures reported by Amazon may differ.

[Sample Book Title] — Daily Sales & Profit

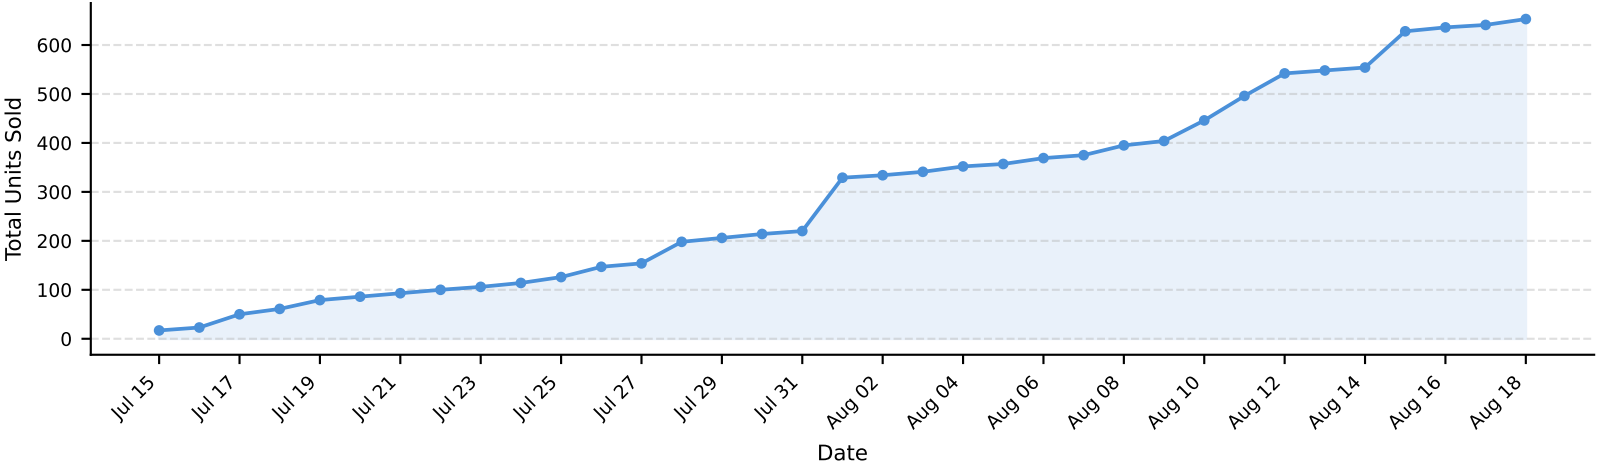

Estimated copies sold each day, derived from the daily BSR (see Methodology on the cover page). Spikes usually track promotions, ads, or organic ranking improvements.

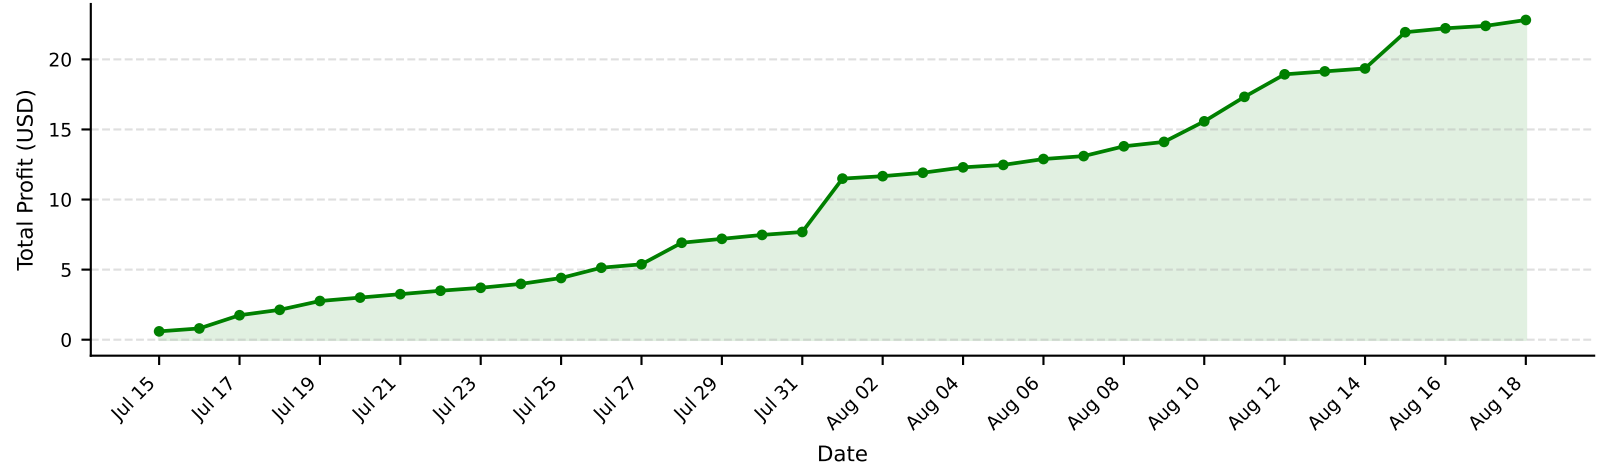

Estimated gross royalty profit earned each day. Useful for spotting high-revenue days and correlating them with marketing activity.

[Sample Book Title] — Cumulative Sales & Profit

Running total of estimated units sold across the period. A steadily rising slope indicates sustained organic sales momentum.

Running total of estimated profit across the period. Use this to track whether the monthly revenue target is on pace.

[Sample Book Title] — Monthly Profit Summary

Month	Est. Units Sold	Total Profit	Avg Daily Profit	Days
Jul 2026	220	\$7.68	\$0.45	17

All complete calendar months with data (first-to-first). The current partial month is excluded — each row spans exactly one full month.
